**SUPERB WOOL**

-TUNISIAN SHEEP-

THE TUNISIAN SHEEP mainly comes from the Near East Fat-tailed and two other European origin breeds. It is actually a coarse type of wool as the sheep live in the heat of desert areas. The character of wool is bulky but light, which is the effort of the good wool preparation of material in ecological ways.

HIGHLAND Co., Ltd.

SPECIAL CONDITIONS

We recommend to test different colors representing the possible production. Different colors require adjustments in the density of knitting and in treatment process. The tunisian wool contains, like natural characteristic, a little percent of blackhair visible in light colors. A new waxing is recommended 20 days after the shipment date but only if needed. please take care not to damage the yarn as to obtain soft cones and even tension. The colors reelings in shade card are not fully representative and may present slightly differences. The evidence during sampling phase of " abnormal characteristics ", not mentioned in the technical sheet, should bring to an analysis with our technical department to determine if it is an occasional phenomenon or standard quality. Considering the particular structure of this yarn, it is normally advisable to consider 5 % of waste panels. No claims can be accepted on knitted panels for more than 5KG of each dye lot and in no case on finished garments.
